## DETAILED ACTION

### *Specification*

1. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

### *Claim Rejections - 35 USC § 103*

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-6 and 11-16 are being rejected under 35 U.S.C. 103(a) as being unpatentable over Barkhordarian (U.S. Patent # 6,144,726).

In claims 1, 2, and 11-12, Barkhordarian shows, in figure 2, a layer 20 with low electrical resistance of a first conductivity type, a breakdown-voltage sustaining layer (the layer above the dotted line) above the layer with low electrical resistance. The breakdown-voltage sustaining layer comprises semiconductor regions of the first conductivity type. A well region 32 of a second conductivity type is shown in the surface portion of the breakdown-voltage sustaining

Art Unit: 2826

layer. A source region 52 of the first conductivity type is shown in the surface portion of the well region. Surface regions of the first conductivity type are shown in between the well regions and are the extended portions of the breakdown-voltage sustaining layer. There is a gate electrode 41 above the extended portion of the well region extended between the surface region and the source region with a gate insulation film 40 interposed therebetween. A source electrode 70 is on contact commonly with the source region and the well region. A drain electrode 75 is disposed on the back surface of the layer with low electrical resistance. The figure also shows where the gate electrode comprises a plurality of stripes each surrounded by a well region in a plane parallel to the surface of the chip.

As to claims 3-6 and 13-16, claims 3-6 and 13-16 recite dimensions that are deemed critical. They are a matter of design choice.

**Note:** The specification contains no disclosure of either the critical nature of the claimed dimensions or any unexpected results arising therefrom. Where patentability is said to be based upon particular chosen dimensions or upon another variable recited in a claim, the Applicant must show that the chosen dimensions are critical. In re Woodruff, 919 F.2d 1575, 1578, 16 USPQ2d 1934, 1936 (Fed. Cir. 1990).
